Paint on photos using geometric primitives In the following step, you can tweak the number of geometric shapes to add by setting any value from 1 to 500 (the large number, the better results but slower process). As for the shape types, you can include any combination of triangles, rectangles, ellipses and smileys. The background can be filled with a fixed or autodetected color. Furthermore, you can tweak the starting opacity or let primitive.nextgen do this automatically, set the computation size (in pixels, smaller is faster), specify the viewing size, choose the number

Create perfectly vector images in minutes and keep your original photos safe. A: I haven't tried this, but it looks cool. You can try drawing freehand on it (like in the demo) using the Align tool (the purple square). By aligning the tool to the image, the points that you make will be added to the preview in the lower right of the image preview area. If you release the mouse, the shape will be drawn with a fill of the colour you were using for alignment and a stroke of the starting colour. If you scroll vertically to see the preview at the bottom, you will see your drawing appear in the lower right of the preview and the viewable area expands as you draw. You could also create a cursor that allows you to draw with a brush

and maybe even with a different colour than the image. I guess this isn't a high quality vector image, since it's an image of an image, but it's very cool. Q: Do I need to worry about GNOME applets overlapping when using unity? I like the simplicity of the gnome-shell + unity (unity-2d is basically the same) combination. Unfortunately, I've noticed that some widgets in the global applets menu are overlapping on the left-hand side. This may seem minor, but it's beginning to be a problem. In GNOME Shell: In Unity: Possible culprits: program for sending SMS media player ... How can I stop these widgets from overlapping on the left? A: Alrighty, so after some googling and testing I figured out that there's actually a few ways to have them not overlap: Open the program in question, and make sure it's not maximised Remove the tray icon from the panel, unless your software requires it to be there, in which case, re-install it. Open the Unity tweak tool (via alt-F2) and go to the "Applications" tab. Go to the "Notification" sub-tab, and click on the individual tray icons you want to remove. Right-click and choose "Delete", then restart your computer. Ensure "Notification Area" is checked in the "More Settings" dialog. If you want the icon to reappear on the panel, go to the "Notification Area" sub-b7e8fdf5c8

means more precise results but slower task). Set the shape, background color, starting opacity, and other properties As soon as you hit the "Let's go!" button, the application gets busy adding the shapes to the image and asks for a saving location for the new file, along with name. During this time, you can get a preview of the output file in the main window, along with the percentage of similarity (compared to the original photo). There's a lot which can be accomplished using just primitive shapes, with the imagination being your only limit. You can check out this gallery to convince yourself. The app had surprisingly low impact on system performance in our tests and finished photo tweaks quickly. All aspects considered, primitive.nextgen offers a simple and straightforward solution for drawing on images with the help of geometric primitives. is available for download from our website.

I am working with a winjs function that looks like this var fn = win.ui.appBarIcon.add(); I am wanting to return fn to another function to do something with it. But win.ui.appBarIcon.add(); returns an object not a string. What would be the best way to return a string? A: It returns an object, so you have to call the function from it, like this: var fn = win.ui.appBarIcon.add(); var str = fn.toString(); Q: What is the difference between the.bss and.data sections? I'm reading M2M book from google, and I'm confused about the.bss and.data section. Are they seprate? A: In my opinion, bss stands for "global bss". It is the space
